Our analysis builds on a case study of the spread of English as a medium of instruction (MoI) in South Korean higher education. The Asian financial crisis of Subject: 1997/98 was the catalyst for a set of socioeconomic transformations that led to the imposition of Language and Linguistics (120) "competitiveness" as a core value. Competition is heavily structured through a host of testing, assessment, and ranking mechanisms, many of which explicitly privilege English as a terrain where individual and Psychology (76) societal worth are established. University rankings are one such mechanism structuring competition and Computer Science (16) constituting a covert form of language policy. One ranking criterion-internationalization-is particularly Education (5) easy to manipulate and strongly favors English MoI. We conclude by reflecting on the social costs of elevating competitiveness to a core value enacted on the terrain of language choice.
